TITLE	Rhode Island Public Schools 1989 Education Indicators: Education Outcomes, Community Context, Policies and Practices.
INSTITUTION	Rhode Island State Dept. of Education, Providence.
PUB DATE	Jan 90
NOTE	56p.
PUB TYPE	Statistical Data (110)
EDRS PRICE	MF01/PC03 Plus Postage.
DESCRIPTORS	Attendance; *Community Characteristics; Educational Finance; Educational Policy; Educational Practices; Elementary Secondary Education; Enrollment; Graduation; *Outcomes of Education; *Public Schools; School Demography; *School Districts; State Programs; Statistical Data; Student Evaluation; Tables (Data); Testing Programs; Test Results
IDENTIFIERS	*Educational Indicators; *Rhode Island; Status Reports

ABSTRACT

Information on the status of Rhode Island public schools is provided in the form of educational indicators of three types: (1) education outcomes; (2) community context; and (3) policies and practices. Education outcomes are student testing and other measures of student success. Included are student results on the Metropolitan Achievement Test, graduation rates, and attendance rates. Community context indicators describe the characteristics of a community, including demographic, enrollment, and financial resource items. These provide a framework in which education outcomes can be evaluated. Indicators of policies and practices provide descriptions of programs, organization, regulations, and budgets in operation. These indicators are the results of decisions made by officials; they are subject to change if the need arises. Indicators are presented in three tables each for the state as a whole and for Rhode Island's 37 school districts. (SLD)

STATE OF RHODE ISLAND & PROVIDENCE PLANTATIONS
DEPARTMENT OF EDUCATION
22 Hayes Street
Providence, R.I. 02908

J. Troy Earhart
Commissioner

January, 1990

TO ALL RHODE ISLANDERS:

A strong education system, responsive to the needs of students, parents, and other citizens, is essential to the social and economic health of Rhode Island. To ensure the growth and development of this education system, meaningful information on its status must be available to guide policy formation, stimulate educational improvement and inform the public.

This report, the third in an annual series, is designed to provide that information in the form of education indicators. The report presents three types of indicators about the public school system.

- **Education Outcomes** - This includes results of student testing and other measures of student success.
- **Community Context** - This includes demographic, enrollment and financial resource information about a community. This type of indicator is useful as a framework for reviewing education outcomes.
- **Policies and Practices** - This includes information on the programs, organization, regulations and budgets which are now in operation.

These education indicators provide essential information about the performance of our educational system. They tell us where progress is being made and whether problems may be occurring. At the same time, these indicators cannot possibly tell us everything about a school system. No report can replace a visit to our schools, discussions with the teachers and staffs, and observation of the educational process.

I hope you will find this report useful.

Sincerely,

J. Troy Earhart

J. Troy Earhart
Commissioner

The Board of Regents does not discriminate on the basis of age, sex, race, religion, national origin, color or handicap in accordance with applicable laws and regulations.

USING EDUCATION INDICATORS

THE INDICATORS

Three types of education indicators are presented in this report.

- Education Outcomes - These indicators are the outcomes, or results, of the education system. More specifically, these are measures of student success. Included are test results, graduation rates and attendance rates.

- Community Context - These indicators describe the characteristics of a community. These characteristics are relatively set; that is, they are not subject to rapid alteration. Included are demographic, enrollment and financial resource items. This information provides a framework in which to consider the education outcomes.

- Policies and Practices - These indicators provide descriptions of programs, organization, regulations and budgets which are now in operation. These factors are the result of decisions made by the officials and the citizens and, as such, can be changed if the need arises.

Taken together, these indicators present several aspects of Rhode Island's education system. The separate indicators, as well as the links among them, contribute to our understanding of education on a statewide basis and in the cities and towns.

USES AND LIMITATIONS

Different readers, with varying needs, will view the indicators from different perspectives. However, the following comments on the uses and limitations of education indicators are relevant to all users.

- Uses - Education indicators highlight the strengths and weaknesses in a system. They allow monitoring over time. They provide sign-posts, pointing to both problems and possible solutions. They are especially valuable if they focus on schooling outcomes which are generally considered to be essential.

- Limitations - Education indicators are limited in scope, describing only a portion of the education system. They do not address the interaction between students and teachers, or among the various students. In fact, much of the learning and teaching in our classrooms cannot be reduced to an indicator. Indicators do not provide clear links between cause and effect. They should not be used to make inappropriate comparisons or judgements.

There is an additional concept to keep in mind when using the education indicators. Some of the indicators measure a school district's compliance with a state requirement. A district may, however, actually exceed the state requirement. For example, the report may show a district to be in compliance with the Basic Education Program standards. Perhaps that district far exceeds the standards. Or, the indicator may show that a district's graduation requirements exceed the state requirement - yet the nature of the additional requirement is not shown. The person who wishes a complete picture of a district may pursue such questions at the local level.

Education indicators can contribute to a complete and sound decision making process. Used well, they will assist educators, citizens and policy makers as they seek to strengthen Rhode Island's schools.

REVISIONS FOR 1989

This publication for the first time includes an Average Class Size Indicator for:

- o Elementary Grades (K-6)
- o Secondary Grades (7-12)
- o Secondary Core Courses (9-12)

An explanation of this indicator is in the Definition Section of this report.

DEFINITIONS

The section on definitions begins on page 3. For each indicator, there is information on how the indicator was derived and the time period which is covered. It is important for the reader to refer to these definitions to ensure accurate interpretation of the data.

Two symbols are used in this report:

- o NA - means that the information was not available at the time that the report was published.
- o Dashes (---) - means that the district does not operate that type of programs, or have that particular group of students, or that the calculation is not appropriate in this case.

DEFINITIONS AND EXPLANATORY NOTES

A. EDUCATION OUTCOMES

TEST SCORES*

Basic Skills - Average test scores are provided for students at grades 3, 6, 8 and 10 based on the nationally normed Metropolitan Achievement Test (MAT) and, for grade 3 and 6, on a writing performance test. Test scores on the MAT are presented in terms of the national percentile scale on which the national average score is 50 in each of the test areas (reading, mathematics, language and total test). As an example, an average score of 60 for a school district would mean that the average student in the district scored equal to or better than 60 percent of students nationally.

The writing achievement score is based on an essay written by students. The score specified is an overall assessment on a scale of 2-8 points. Achievement test scores are known to be strongly influenced by home and community context factors. Therefore, achievement test scores cannot be used directly as measures of educational quality. Results are for 1988-89.

Health - Health knowledge test scores are provided for students at grades 3, 6, 8 and 10. The health knowledge test is a multiple-choice written test developed by the Rhode Island Department of Education. The tests differ for each grade. The score provided is the average percent of questions answered correctly. Results are for 1988-89.

Physical Fitness - Average physical fitness test scores are provided for students in grades 3, 6, 8 and 10 based on the nationally normed Presidential Youth Fitness Test. Test scores are presented in terms of the national percentile scale, on which, the national mid-point in performance is scored at 50 in each of the test areas. (Required events from a test battery measuring abdominal strength and endurance, speed and agility, flexibility, cardiorespiratory fitness, and upper body strength and endurance, vary by grade.) The average physical fitness score includes results only for students completing all required events in a grade. Results are for 1988-89.

Compensatory Education Score Gains - Most school districts receive special federal and state funds for compensatory education for schools with high concentrations of poverty. Students in the programs are tested before and after receiving supplemental instruction during the school year. The programs involved are the federal Chapter 1, ECIA program and the state "Section 4" program.

Achievement data are presented here on the normal curve equivalent (NCE) scale. The subjects are reading, mathematics and language. Any positive NCE score indicates improvement, but an average NCE gain of 7 points can be regarded as significant improvement. The statewide results are for grades 1 through 12. The results for each district are for the grades in which there are programs. Test results are for 1988-89.

* Statistics aggregated for fewer than five students are not reported.

Scholastic Aptitude Test Scores - The average Scholastic Aptitude Test (SAT) scores of public high school seniors are reported. SAT scores, which have a minimum value of 200 and a maximum value of 800, are commonly used as part of the college admissions process. Since this is a voluntary test, test score averages for a school district can be influenced by the number of students choosing to take the test. In addition, average test scores are strongly influenced by student, home and community characteristics that are beyond the influence of schools. Caution in interpreting annual changes is advised. For these reasons, SAT scores are not a valid measure of the educational quality of a school system (e.g. fluctuations of 20 or more points in either the verbal or math score average are known to occur for at least one third of schools nationally each year where fewer than 100 students take the SAT in a given school).

SAT scores are reported separately in the areas of verbal skills and mathematics skills; the sum of the two scores is also reported. SAT score averages are also provided for those students who have taken both geometry and two or more years of a foreign language. This refinement helps to focus on the group of students who appear to be college-bound. The percent of the graduating class taking the SAT is indicated. The results are for 1988-89 public schools only.

GRADUATION, ANNUAL DROPOUT AND ATTENDANCE RATES

High School Graduation Rate - The high school graduation rate indicates the percent of a ninth grade class that will graduate based on the existing dropout incidence among 9th, 10th, 11th, and 12th grade students. It is a four-year cumulative rate, and represents the probability of an individual student graduating from high school.
If this cumulative completion rate is subtracted from 100, one would have the cumulative dropout rate. Figuring rates in this manner represents a four year picture which takes into account key factors, such as: annual differences in class size, varying economic conditions, and the different grades at which students dropout.

The rate is computed using fall enrollment data and the number of dropouts by grade level from July 1, 1988 to June 30, 1989, as submitted by school districts. (If a student, who dropped out, should return at the start of the next school year, he/she remains as a dropout statistic for the previous year.) Specifically, dropout ratios for each grade are computed by dividing dropouts at a grade level by the Fall, 1988 enrollment at that grade level. A retention ratio is then computed at each grade as 1 minus the dropout ratio. The four retention ratios are multiplied together and then, multiplied by 100 to yield a four-year, cumulative graduate rate. The rate is for 1988-89.

Annual Dropout Rate - The annual dropout rate is the total number of students for grades 9-12, who dropout in a single year, divided by the total student enrollment for grades 9-12 in the fall of that year, multiplied by 100. This statistic represents a one year picture and includes the key factors occurring in this period. (It is not statistically accurate to multiply the annual dropout rate by four to derive a cumulative four year rate). The rate is for 1988-89.

In considering the above rates, it should be noted that it is possible that some students who are counted as dropouts may have enrolled in another learning program in this state or elsewhere.

Attendance Rate - Attendance rate reflects the degree to which students are present in school. The attendance rate is computed by dividing the district's Average Daily Attendance (ADA) by the district's Average Daily Membership (ADM) and multiplying the result by 100. The rate is for 1988-89.

General Educational Development (GED) - Adults may complete high school through a special study and testing process leading to a high school equivalency diploma. This program is often referred to as the GED (General Educational Development) program. The number of GED diplomas awarded in Rhode Island is indicated for 1988. This indicator is not presented for individual school districts.

B. COMMUNITY CONTEXT

STUDENT ENROLLMENT

Public School Enrollment - The number and percent of students enrolled in public schools within the district. Figures are for October, 1988.

Enrollment of Residents in Non-Public Schools - Students residing in the attendance area of the school district may attend non-public schools either in the same community or elsewhere. The number and percent of students in the district who attend non-public schools are shown. Figures are for October, 1988.

Enrollment in Vocational-Technical (Area Schools) - High school students may enroll in career-oriented vocational-technical programs at vocational-technical area schools. Listed is the number of students enrolled in the vocational-technical area schools from the sending district. The percentage is the ratio of area school enrollment to total grades 10-12 enrollment for the district. Figures are for 1988-89.

Enrollment in Vocational-Technical (High Schools) - High school students may enroll in career-oriented vocational-technical programs at local high schools. The percentage is the ratio of local vocational-technical program enrollment to total grades 11-12 enrollment for the district. Figures are for 1988-89.

Enrollment in Special Education Programs - Students with physical or learning disabilities may be formally placed in special education programs. Listed is the number of resident students receiving services at the close of the 1988-89 school year. The percentage is the ratio of the number of students receiving services to resident average daily membership.

Enrollment in Programs for Limited-English Proficient Students - Students with a foreign language background who have limited English language skills may be placed in special programs for the limited-English proficient. Listed is the number of resident students receiving services at the close of the 1988-89 school year. The percentage is the ratio of the number of students receiving services to resident average daily membership.

Enrollment in Compensatory Education Programs - Students who require special help in basic skills may be served by Chapter 1 - Section 4 (federal and state) programs. The number and percent of students served are provided. The figures are for 1988-89. Locally supported remedial education services are not included.

Enrollment in Programs for Gifted/Talented Students - Students who have exceptional abilities either academically or artistically may be served by special state funded programs for the gifted and talented. The number and percent of students served by state funded programs are provided. The figures are for 1988-89. Locally funded gifted education services are not included.

Minority Enrollment - Minority students are defined as Black, Hispanic, American Indian/Alaskan Native or Asian/Pacific Islander. The number and percent of students with a minority background are indicated. The figures are for October, 1988.

Adults Completing High School - These statistics represent the number and percent of adults (age 25 and over) in the community with an educational level of high school graduate or higher. Information is based on the 1980 census.

RESOURCES

Median Family Income - This indicator records the family income level at which half of the community families had more income and half had less is measured in the 1980 federal census. Single person households are not counted as families.

Per Capita Income - This measure of the economic status of persons in the community is a 1985 estimate made by the U.S. Bureau of the Census. It represents average income per person in the community, counting persons of all ages.

Property Value Per Pupil - This is a measure of community wealth. Equalized weighted assessed valuation divided by resident average daily membership is indicated. Figures are based on 1988-89 data.

Municipal Tax Rate (Equalized) - This measure provides an estimate of the tax rate for a community as if the value of assessed property across communities were "equalized." It is computed by the Office of Municipal Affairs, Tax Equalization Section, Rhode Island Department of Administration. The rate (per $1,000) is for tax accessed value as of 1987. This year all districts will show a lower amount for the indicator Municipal Tax Rate (Equalized). This decrease is due to a lower assessment ratio number being used in the calculation by the Office of Municipal Affairs, Tax Equalization Section.

Local Education Revenues Per Pupil as Percent of Per Capita Income - This indicator reflects local educational support for schools. Higher values indicate greater support for schools in relation to community wealth. The figure is based on 1988-89 revenue data and 1985 per capita income data.

Percent of Enrollment with Free or Reduced Price Lunches - Students may receive free or reduced price school lunches if the income of their parents falls within certain low income guidelines. This measure indicates the average number and percent of students in the district granted free or reduced price lunches in October, 1988.

Percent of State Expenditures Allocated to Elementary/Secondary Education - This indicator specifies the percent of the total state budget allocated to elementary and secondary education, kindergarten through grade 12. Figures are for 1988-89. This indicator is not provided for individual school districts.

SIZE

Number of Districts by School Enrollment Size - The number of school districts in each of five enrollment size categories as of 1988-89 is presented. This indicator is not provided for individual school districts.

REVENUES FOR EDUCATION

Revenues for Education From Local, State and Federal Programs - This indicator presents revenues from local, state and federal sources for the educational program as a whole for 1988-89.

C. POLICIES AND PRACTICES

APPROVALS

Basic Education Program - The Basic Education Program (BEP) standards describe the minimum program which each district must offer to its students. School districts are monitored for compliance with BEP standards. Districts are identified as being in compliance or not in compliance with BEP standards. The Rhode Island section indicates the number of districts with approved programs. Approval is obtained either by meeting all standards or by having an acceptable plan on file to meet all standards by September, 1990. Results are presented here as of November, 1989.

Membership in New England Association of Schools and Colleges - High schools may apply to be accredited members of the New England Association of Schools and Colleges (NEASC). Membership implies accreditation. NEASC membership status is indicated for local districts with high schools. The Rhode Island section indicates the number of school districts with high schools with membership status in NEASC.

STAFF

State Supported Staff Development - This indicator notes that there is a state supported staff development program. Local districts participate through non-competitive grants. This information is not provided for individual school districts.

Teacher Competency Testing Requirement - This indicator notes that the state requires new teachers to pass a written test. This information is not provided for individual school districts.

INSTRUCTION

AVERAGE CLASS SIZE - This indicator may reflect the opportunity that teachers have to provide individualized attention to students. The Average Class Size is computed by dividing the total number of students by the total number of sessions for a classroom teacher. A classroom teacher is one who teaches a different group each period/session. The categories of Average Class Size reported are:

Elementary Grades (Grades K - 6) - This is the average class size of a typical classroom in grades kindergarten to six.

Secondary Grades (Grades 7 - 12) - This is the average class size of a typical classroom in grades seven to twelve.

Secondary Core Courses (Grades 9 - 12) - This is the average class size of core courses (Mathematics, Science, English and Social Studies) in grades nine to twelve.

Instructional Days/Hours Required - These measures specify the state requirement for the number of days schools must be in session and the number of hours per day schools must be in session.

Requirement to Offer Kindergarten - This indicator notes that the state requires the districts to offer kindergarten classes.

Requirement to Attend Kindergarten - This indicator notes that by 1990, students entering the first grade in Rhode Island must have attended kindergarten.

Mandatory Ages of School Attendance - The state age requirement for attending school is specified. Attendance is required until the 16th birthday.

High School Graduation Requirements - State minimum requirements for graduating from high school are given in terms of course credits (Carnegie Units) for both college-bound and career-bound students in the Rhode Island section. For each school district, yes/no is given, indicating whether local graduation requirements exceed state requirements. This is provided for both college-bound and career-bound requirements. These requirements are for 1988-89.

EXPENDITURES*

All Programs - Total expenditures and per pupil expenditures are presented for the public school program for students in kindergarten through grade 12. The per pupil expenditures are calculated using several different measures of expenditures and student counts to ensure an accurate match of students to funds.

General Instruction - This includes expenditures for the kindergarten through grade 12 instructional program, vocational and technical programs offered at the comprehensive high schools, the regular special needs, instructional media, school libraries, and guidance. Per pupil expenditure is a ratio of this expenditure category to resident average daily membership or average daily membership, which ever is the highest number for the district. The selection of the highest number of students is necessary to avoid inflating or deflating per pupil instructional costs for a specific district. By definition, average daily membership includes students attending schools in the district, no matter where they reside. Thus, to divide instructional costs by average daily membership for a district, where high school students attend a high school in another district, would inflate its per pupil costs. For a district whose average daily membership is greater than resident average membership, the per pupil costs would be deflated.

* Expenditure data are for 1988-89 and are preliminary, pending audit verification.

Instructional and Administrative Support - This includes expenditures for staff training, curriculum development and supervision, research, and administrative activities. Per pupil expenditure is the ratio of this expenditure to average daily membership.

Non-Instructional Services to Students - This includes expenditures for health services, food services, athletics, recreation, other student activities, and safety. Per pupil expenditure is the ratio of this expenditure to average daily membership.

Facilities Management - This includes expenditures for operating and maintaining buildings and grounds. While acquisition and construction of facilities could be included, this occurs only rarely. Per pupil expenditure is the ratio of this expenditure to average daily membership.

Transportation - This includes expenditures for transporting students. Per pupil expenditure is the ratio of this expenditure category to the number of students bused.

Special Programs - This section includes expenditures for the instruction of students in special programs. Students may be educated in special programs for all or part of the day; these expenditures are for the portion of the day the student spends in the special program.

Vocational-Technical Area Schools - This includes expenditures for the programs offered at the nine vocational-technical area schools. The per pupil expenditure is the ratio of reimbursable expenditures in this category to the number of full-time equivalent students.

Special Education - This includes expenditures for special education programs. The per pupil expenditure is the ratio of reimbursable expenditures in this category to the number of full-time equivalent students.

Limited-English Proficient - This includes state allocations and local expenditures for programs for students who require help in basic skills because their English proficiency is limited. The per pupil expenditure is the ratio of reimbursable expenditures in this category to the number of full-time equivalent students.

Compensatory Education - This includes expenditures for programs for students who require help in basic skills (per pupil costs are not available).

Gifted/Talented - This includes expenditures for programs for students with exceptional academic or artistic abilities (per pupil costs are not available).

Expenditures Per Pupil for Instructional Materials - This is a measure of per pupil expenditures for instructional materials, such as textbooks and instructional supplies. Expenditures over a three-year period are averaged. Figures are for 1986-87 to 1988-89.
